

The definitive study, made over a number of years, by a leading research scientist, on the subject of why some rifles shoot very well... some shoot fairly well... and others shoot poorly.

RIFLE ACCURACY FACTS

by Harold R. Vaughn

PUBLISHED BY PRECISION SHOOTING, INC.

TABLE OF CONTENTS

Chapter	Page
Acknowledgments	i
About the Author	iii
Table of Contents	vii
1 Introduction	1
Contains data on the accuracy to be expected from different types of rifles and background information on why and how this work was done.	
2 Internal Ballistics.....	7
Methods of measuring chamber pressure are discussed and the complete internal ballistics of a representative cartridge (270 Winchester) are measured experimentally for use in later chapters. Such things as bullet engraving force, different powders, and cartridge case failure are discussed.	

Chapter	Page
3 Chamber And Throat Design	33
<p>Methods of machining chambers and throats and their effects on accuracy are discussed. Various types of rifling and barrel problems are analyzed.</p>	
4 Barrel Vibration	41
<p>Detailed measurements and theoretical calculations of barrel vibration are presented along with methods of reducing barrel vibration. The effect of barrel vibration is measured on sporters, bench rest, and rail guns.</p>	
5 Scope Sight Problems	91
<p>Scope sight and scope mount problems are investigated and some solutions to these problems are found.</p>	
6 Barrel-Receiver Threaded Joint Motion	103
<p>It was experimentally determined that the barrel-receiver threaded joint moves as a result of the shock from firing. A simple solution to the problem is described.</p>	
7 Muzzle Blast	123
<p>The effect of bullet in-bore cant and muzzle blast on dispersion were determined experimentally and theoretically. Methods of reducing dispersion from this source are presented.</p>	
8 Bullet Core Problems	155
<p>Bullet core slippage due to the spin up torque is measured and found to be a problem. Other bullet problems are analyzed.</p>	
9 Bullet Imbalance	169
<p>The static and dynamic balance of bullets is measured and the effect of imbalance on dispersion is evaluated theoretically and experimentally. The causes of bullet imbalance are discussed.</p>	

Chapter / Appendix / Other	Page
10 External Ballistics	181
<p>The detailed motion of a bullet after leaving the muzzle is shown and the effect of this motion for a given initial disturbance is evaluated. The effect of wind, gyroscopic stability factor, and ballistic coefficient on the bullet's trajectory are shown in detail. Chronograph development and use are discussed. Wind gages and their use is covered.</p>	
11 Other Problems	223
<p>Miscellaneous problems, such as bore cleaning, bullet coating, drift free bullet design, case neck tension, and shooting techniques are discussed.</p>	
 Appendices / Other	
A Accelerometer Design	237
B Barrel Vibration Computer Equations	247
C Bullet Balance Device Design	253
D Six Degree Of Freedom (6DOF) Computer Equations	261
E Tunnel Range Construction	265
F Rail Gun	271
G Shadowgraph Testing	277
Glossary and Abbreviations	281
References	287
Notes	291
